

CAREER OBJECTIVE

The profound impact of technology on individuals has fueled my passion for computers and it's evolving technology right from the beginning when I first heard about computers. Having successfully completed my undergraduate degree in Information Science & Engineering, I have developed a strong desire to expand my knowledge and the passion to evolve into a highly skilled software developer which led me to the decision of pursuing a M.Tech in Software Engineering specialization in Full Stack Engineering .

Achieving a commendable academic record during my intermediate college years, combined with my strong passion for pursuing Computer Science, played a pivotal role in securing my admission to one of Bangalore's premier engineering institutions, RNS Institute of Technology, affiliated to Visvesvaraya Technological University. Through courses such as Web Technologies, Artificial Intelligence & Machine Learning, I acquired comprehensive theoretical knowledge and practical training across diverse facets of Computer Science, providing me with a holistic understanding of real-world applications.

While pursuing my undergraduate degree, I had the opportunity to engage in captivating projects. One of these projects was titled "Covid-19 Tweet Sentiment Analysis," which focused on the critical task of sentiment analysis on Twitter. The main goal was to create an effective classifier for categorizing tweets into positive or negative sentiments. Additionally, the aim was to identify a range of emotions like happiness, frustration, anger, and sadness using the Long Short-Term Memory Model (LSTM) machine learning algorithm and utilizing the Python Programming Language as the primary tool.

Driven by the worry of PIN exposure in public, my team of 4 embarked on the final year degree project titled "Design and Implementation of Eye Pupil Movement-based PIN Authentication System". This initiative sought to counteract security threats like shoulder surfing, keyboard eavesdropping, and more. Our core objective was to create a secure gaze-oriented PIN authentication system. This involved a smart camera with live eye detection, powered by NI Vision Builder and LabVIEW for real-time tracking and recording on the camera board, using the Python Programming Language. A feeling of immense happiness and pride filled us when our project was recognized as a standout achievement at the university, and we also garnered numerous appreciations from the faculty members.

After completing my graduation, I joined Accenture Solutions Pvt. Ltd as a Software Engineer, which significantly enhanced my skills and provided me with valuable insights into software development. The prospect of creating tangible software solutions was exhilarating, and I seized the chance to develop a full-stack application for the pharmaceutical and life sciences industry using HTML, JavaScript, and Java Servlets. The 2.6 years tenure at Accenture not only transformed me into a proficient software developer but also boosted my confidence to independently shoulder responsibilities, effectively collaborate, and thrive under professional leadership.

I believe that the opportunity to pursue a M.Tech in Software Engineering specialization in Full stack Engineering at BITS Pilani's Work Integrated Learning Program would be a tremendous privilege, providing me with the ideal platform to advance my knowledge in areas such as Data Structures, Algorithms, Artificial Intelligence and other Programming Languages. This program will enable me to contribute to the fascinating world of software technologies.

In conclusion, I am committed to a journey marked by determination and continuous growth. I am dedicated to synergizing my finest skills to invigorate my abilities and make a meaningful impact. Enrolling at a prestigious institution like BITS Pilani holds great promise for shaping me into a well-rounded individual, in harmony with my ambitions. I eagerly anticipate the opportunity to contribute, learn, and evolve within this esteemed academic environment, where I can transform my ambitions into reality.
